Marc Egea i Sala
Software Developer

I'm a developer. That means I can code, test, debug and reason to solve problems. During my years of experience I've worked with multiple teams doing agile, waterfall, on site and remote projects, mostly involving dynamic languages and the web stack.

While really enjoying technical challenges, I believe that creating and maintaining complex software is a social activity, and I value good practices for how they help on global productivity. Also, I'm continuously learning and I love to be involved in tech talks and conferences.

I know I'm better when working with good people and that's what I always look for. I'm a team-player excited to create things.

Barcelona

Perl Developer
Zoopla Property Group
Property Portal, London
August 2016 - December 2016

As part of the Consumer team, I worked on adding functionalities to all ZPG high-traffic sites (zoopla, smartnewhomes, primelocation...) while continuously refactoring the existing code and adding new test to transition from a monolithic architecture to a new microservices architecture.

`perl  refactoring  geo data  mason  solr  mysql`

Full-stack Developer
Overleaf
Startup, London
September 2015 - July 2016

Maintaining and developing new features for Overleaf (collaborative writing and publishing platform) apps and APIs on multiple technologies such as the main web page, the web editor, a LaTeX render server and an in house Git Bridge.

`ruby  rails  node.js  git  react  postgresql  docker  aws  ci`

Full-stack Developer
Soysuper.com
Start-up, Barcelona
April 2013 - August 2015

Autonomous developer inside the tech team and main responsible of the Insights project (metrics and alerts platform for customers). I worked in design, build, test and maintenance of all the pieces of the infrastructure and also contribute to plan and prioritize the iterations and new features.

`perl backbone.js mojolicious elasticsearch mongodb gulp sass
redis`

System Admin and Software Developer
openTrends
Consultancy, Barcelona
October 2008 - April 2013

Working on all the steps of the systems department: from junior sysadmin to tech lead. The department was in charge of all the infrastructure and responsible to maintain all the in-house servers and services.

As a Software Developer I worked on multiple projects, most of them involving various dynamic languages (Ruby, Perl, PHP) or designing infrastructures. During my years in openTrends, I worked under the supervision of a tech lead on medium projects and leaded some small projects.

`dynamic languages zimbra redmine jenkins system administration
linux vmware`

Junior Software Developer
Deister Software
Enterprise Software, Barcelona
June 2007 - April 2008

In my first tech role I contributed to the company's proprietary web desktop, developing add-ons (such as 3D charts) for the platform with front-end technologies and working to modernize components (transition from tables to CSS and implementing AJAX calls).

`html  css  javascript  ajax  jsp  svg`
